

INSTALLATION GUIDE

Hey, this is Lomby! Thanks so much for supporting me on Patreon! ❤️

Under my **Patreon** Post, you will find 5 attached files, including this one.

- **Java World Folder:** *[Name of the Build].zip*
- **Bedrock World File:** *[Name of the Build].mcworld*
- **Schematic File:** *[Name of the Build].schem*
- **Litematica File:** *[Name of the Build].litematic*
- **Installation Guide (This File):** *Installation Guide.pdf*

TUTORIAL FOR JAVA EDITION USERS:

Bedrock Edition is below!

How to use the World Folder:

Simply drag and drop the world folder into your „**saves**“ directory inside your Minecraft folder.

The easiest way to find this folder is by opening Minecraft, going to Resource Packs, and clicking „**Open Pack Folder**“.

From there, go one directory up, and you'll be in your main Minecraft folder. You should see the „**saves**“ folder—place the downloaded world folder there. The world will now show up in Singleplayer mode in-game.

How to use the Schematic File:

To use the schematic file, go to your Minecraft directory again (see instructions above). This time, open the „**config**“ folder, then go to „**worldedit**“, and finally open the „**schematics**“ folder.

Copy the .schem file into that folder.

In the game, use the following commands to load and paste the schematic (assuming you have WorldEdit installed):

//schematic load [schematic name]

//paste -e

How to use the Litematica File:

Again, navigate to your Minecraft directory as explained earlier.

Look for the „**schematics**“ folder and copy the .litematic file into it.

In-game, you can load it through the Litematica menu (press the **M** key).

Use the „**Load Schematics**“ option to bring the build into your world.

Note: The Litematica mod must be installed for this to work.

TUTORIAL FOR BEDROCK EDITION USERS:

How to use the Bedrock World File:

In Minecraft, go to the „**Worlds**“ tab and click on the „**Import**“ option. Then simply select the .mcworld file from the the attachments and click „**Done**“. The world should now appear in your game.

If anything is unclear, feel free to contact me via Patreon or ask on my Discord Server. ❤️
